How to restore the Default settings (refer to table of parameters in this sheet)

- 1) Access parameter EZY (entering password 22 and scroll parameter list).
- 2) Select the desired configuration:
 - EZY = 0 → No changes;
 - EZY = 1 → Restore of default settings (refer to Table of parameters in this sheet);
- 3) Exit the setting procedure (holding SET button for more than 3 sec.).
- 4) Power off the device and then power it on again while holding SET button.
- 5) The display shows "CE" to indicate that the configuration has been restored.

WARNING: separate as much as possible the probe and digital input signal cables from the cables carrying inductive loads and power cables to avoid possible electromagnetic disturbance. Never run power cables (including the electrical panel wiring) and signal cables in the same conduits.

Switching the device ON/OFF

Press UP for more than 3 s. The control and defrost algorithms are now disabled and the instrument displays the message "OFF" alternating with the temperature read by the set probe.

Manual defrost

Press DOWN for more than 3 s (the defrost starts only if the temperature conditions are valid).

Continuous cycle

Press UP and DOWN together for more than 3 s.

for the connections only use copper wires.

Safety standards

compliant with the relevant European standards. Installation precautions:

- the connection cables must guarantee insulation up to 90 °C;
 - ensure a space of at least 10 mm between the case and the nearby conductive parts;
 - digital and analogue input connections less than 30 m away; adopt suitable measures for separating the cables so as to ensure compliance with the immunity standards;
- Secure the connection cables of the outputs so as to avoid contact with very low voltage parts.
